Valve Ureteral Stent
Rüsch Superglide Valve Ureteral Stents

A stent designed to reduce vesicorenal and/or vesicoureteral reflux\textsuperscript{1,3} and help enhance patient comfort over long term use compared to ureteral stents without anti-reflux valves\textsuperscript{1,2,4}.

Superglide Valve Ureteral Stents
Made of polyurethane with hydrogel coating
- Graduation in cm
- Stent completely radiopaque
- Pigtail and drainage eyes as indicated in the table
- Sterile, single use
- Not made with natural rubber latex

Easy application – pigtail tips
To help ensure easy and gentle insertion, the tips are smooth and conical. Once the guidewire is removed, the tips are designed to assume their original pigtail shape thanks to the memory effect of the material, which helps ensure secure retention in the renal pelvis.
Anti-reflux valve
Made of polyurethane at the bladder end of the stent designed to reduce vesicoureteral reflux. The valve is designed to avoid pressure increase in the upper urinary tract, which may help reduce flank pain.

Central drainage eye/lumen
Two drainage eyes
Open valve allowing urine flow
With rising bladder pressure, the valve closes

Superglide Valve Ureteral Stent
